Art Unit: 2437

DETAILED ACTION

1. Claims 1-37 are pending.

2. Amendment filed 02/23/2009 has been received and considered.

Claim Rejections - 35 USC § 101

3. The rejection under 35 U.S.C. 101 has been withdrawn based on the filed amendment.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1-4, 6-8, 10, 11, 18-19, 21-25, 34 and 36 are rejected under 35
 U.S.C. 103(a) as being unpatentable over Tso et al (US 6088803) in view of Engel et al. (US 6115393).

As per claims 1, 3, 11, 18, 34, and 36, Tso et al discloses an apparatus and method including a protocol parser; a protocol scanner; and, a proscribed code scanner comprised of a scanning means and an indicator whereby said protocol parser intercepts instant messaging or peer-to-peer code on a communications channel and transmits said code to said proscribed code scanner through said protocol scanner (see

column 6 lines 10-24 where the parser performs the functions the protocol parser and the transcode service providers perform the function of the protocol scanner).

Tso et al. fails to explicitly disclose the protocol parser is capable of discriminating among different protocols implemented on top of the transport layer.

However, Engel et al. teaches a protocol parser that discriminates between different protocols implemented on top of the transport layer (see column 19 line 53 through column 20 line 28 and FIG 2 and 19).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use the protocol parser of Engel et al. as the parser of the Tso et al. system.

Motivation to do so would have been to allow statistics, state tracking and tracing operations to be performed (see Engel et al. column 19 lines 35-63).

As per claims 2 and 19, the modified Tso et al. and Engel et al. system discloses a translation means whereby said translation means translates said code to authorized program parameters (see Tso et al. column 6 lines 10-24 and Engel et al. column 19 line 53 through column 20 line 28).

As per claim 4, 6, 23, the modified Tso et al. and Engel et al. system discloses the proscribed code scanner further comprises a scanning means and an indicator means and provide an indication of the presence is scanning finds proscribed code (see Tso et al. column 3 lines 39-54).

As per claims 7 and 25, the modified Tso et al. and Engel et al. system discloses the proscribed code scanner comprises a malicious code scanner (see Tso et al. column 3 lines 39-54).

As per claims 8, 10, and 24, the modified Tso et al. and Engel et al. system discloses the protocol parser further comprises a configuration means for configuring interception parameters (see Tso et al. column 6 lines 10-24 and column 5 lines 27-43).

As per claims 21-22, the modified Tso et al. and Engel et al. system discloses returning said code to a communication channel if said indicator is negative (see Tso et al. column 3 lines 55-65).

6. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Tso et al. and Engel et al. system as applied above, and further in view of Corliss (US 6771949).

As per claim 9, the modified Tso et al. and Engel et al. system discloses an apparatus for processing code comprising: a protocol parser capable of discriminating among different protocols implemented on top of the transport layer (see Tso et al. column 6 lines 10-24 and Engel et al. column 19 line 53 through column 20 line 28) and, a proscribed code scanner; whereby said protocol parser intercepts messaging code on a communications channel and transmits said code for review by said proscribed code scanner and said protocol parser being provided to parse protocols on top the transport layer (see Tso et al. column 6 lines 10-24 and Engel et al. column 19 line 53 through column 20 line 28).

The modified Tso et al. and Engel et al. system discloses intercepting codes that are commonly passed over the Internet (see Engel et al. column 19 line 53 through column 20 line 28), but fails to explicitly disclose that the messaging code is short messaging code.

However, Corliss teaches sending short messages (SMS) over the internet (see column 3 line 57 through column 4 line 3).

At the time of the invention it would have been obvious to a person of ordinary skill in the art for the modified Tso et al. and Engel et al. system to intercept short messaging code.

Motivation, as recognized by one of ordinary skill in the art, to do so would have been to monitor SMS messages.

7. Claims 5, 12, 15-17, 20, 26-29, 32-33, 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Tso et al. and Engel et al. system as applied to claims 1 and 18 above, and further in view of Johnson (US 5682428).

As per claims 12, 17, 26, and 35, the modified Tso et al. and Engel et al. system fails to disclose decrypting the code.

However, Johnson discloses decrypting data (see column 27 lines 23-56).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Johnson's method of decryption in the modified Tso et al. and Engel et al. system of code scanning.

Motivation to do so would have been to be able to reference and manipulate previously encrypted data (see Johnson column 27 lines 23-56).

As per claims 5 and 20, the modified Tso et al., Engel et al. and Johnson system discloses a certification means (see Johnson column 24 line 52 through column 25 line 8).

As per claims 15-16, 27-29, and 32, the modified Tso et al., Engel et al. and Johnson system discloses encrypting the code if the indication of a prescribed code is negative (see Johnson column 27 lines 23-56).

As per claim 33, the modified Tso et al., Engel et al. and Johnson system discloses a separate system inserted in said communications channel, and with at least one of said steps of intercepting said code; decrypting said code; scanning said code for the presence of proscribed code, and providing an indicator for the presence of said proscribed code, occurring on said separate machine (see Tso et al and Johnson as applied to previous claims).

8. Claims 13-14 and 30-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Tso et al., Engel et al. and Johnson system as applied to claims 12 and 26 above, and further in view of Elgamal et al (US 6389534).

As per claims 13-14 and 30-31 the modified Tso et al., Engel et al. and Johnson system fails to disclose the use of SSL or S/MIME encryption.

However, Elgamal et al discloses the use of these encryption techniques (see column 4 lines 15-29).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Elgamal et al's methods of encryption to perform the encryption of the modified Tso et al., Engel et al. and Johnson system.

Art Unit: 2437

Motivation to do so would have been to allow for the encryption suitable for each market (see Elgamal et al column 4 lines 15-29).

9. Claim 37 is rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Tso et al., Engel et al. and Johnson system as applied to claim 30 above, and further in view of Cogger et al. (US 20020087383).

As per claim 37, the modified Tso et al., Engel et al. and Johnson system fails to disclose intercepting with said parser a request from one or the other of an original client and an original server for an SSL transfer, creating with said parser a new SSL server that communicates with said client and a new SSL client that communicated with said server, and intercepting with said SSL client and said SSL server communications that occur between said original client and said original server.

However, Cogger et al. teaches such intercepting, decrypting and re-encrypting using SSL (see paragraph [0060]).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to perform the steps of Cogger et al. in the modified Tso et al., Engel et al. and Johnson system.

Motivation to do so would have been to verify a users session (see Cogger et al. paragraph [0060]).

Double Patenting

10. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory

Art Unit: 2437

obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-8, 10-12, 15-29 and 32-36 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-15 of U.S. Patent No. 7389540 in view of Engel et al.

The claims of '540 contain limitations of claims 1-8, 10-12, 15-19 and 32-36, but fail to explicitly disclose the protocol parser is capable of discriminating among different protocols implemented on top of the transport layer that intercepts instant messaging code.

However, Engel et al. teaches a protocol parser that discriminates between different protocols implemented on top of the transport layer (see column 19 line 53 through column 20 line 28 and FIG 2 and 19).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use the protocol parser of Engel et al. as the parser of the '540 claims.

Motivation to do so would have been to allow statistics, state tracking and tracing operations to be performed (see Engel et al. column 19 lines 35-63).

Art Unit: 2437

11. Claim 9 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-15 of U.S. Patent No. 7389540 in view of Moore et al. as applied above and further in view of Corliss.

As per claim 9, the modified claims in view of Moore et al. teach intercepting codes that are commonly passed over the Internet (see Engel et al. column 19 line 53 through column 20 line 28), but fails to explicitly disclose that the messaging code is short messaging code.

However, Corliss teaches sending short messages (SMS) over the internet (see column 3 line 57 through column 4 line 3).

At the time of the invention it would have been obvious to a person of ordinary skill in the art for the modified system of the '540 claims in view of Engel et al. to intercept short messaging code.

Motivation, as recognized by one of ordinary skill in the art, to do so would have been to monitor SMS messages.

12. Claims 13, 14, 30 and 31 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-15 of U.S. Patent No. 7389540 in view of Moore et al. as applied above and further in view of Elgamal.

As per claims 13-14 and 30-31 the modified claims in view of Engel et al. fail to disclose the use of SSL or S/MIME encryption.

However, Elgamal et al discloses the use of these encryption techniques (see column 4 lines 15-29).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Elgamal et al's methods of encryption to perform the encryption of the modified claims in view of Engel et al.

Motivation to do so would have been to allow for the encryption suitable for each market (see Elgamal et al column 4 lines 15-29).

13. Claim 37 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-15 of U.S. Patent No. 7389540 in view of Engel et al. and Elgamal as applied above and further in view of Cogger et al.

As per claim 37, the modified claims in view of Engel et al. and Elgamal system fails to disclose intercepting with said parser a request from one or the other of an original client and an original server for an SSL transfer, creating with said parser a new SSL server that communicates with said client and a new SSL client that communicated with said server, and intercepting with said SSL client and said SSL server communications that occur between said original client and said original server.

However, Cogger et al. teaches such intercepting, decrypting and re-encrypting using SSL (see paragraph [0060]).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to perform the steps of Cogger et al. in the modified system of the claims in view of Engel et al. and Elgamal.

Motivation to do so would have been to verify a users session (see Cogger et al. paragraph [0060]).

Art Unit: 2437

14. Claims 1-8 and 10-36 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-16 of U.S. Patent No. 7404212 in view of Engel et al.

The claims of '212 contain the limitations of claims 1-8 and 10-36, but fail to explicitly disclose the protocol parser is capable of discriminating among different protocols implemented on top of the transport layer that intercepts instant messaging code.

However, Engel et al. teaches a protocol parser that discriminates between different protocols implemented on top of the transport layer (see column 19 line 53 through column 20 line 28 and FIG 2 and 19).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use the protocol parser of Engel et al. as the parser of the '540 claims.

Motivation to do so would have been to allow statistics, state tracking and tracing operations to be performed (see Engel et al. column 19 lines 35-63).

15. Claim 9 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-16 of U.S. Patent No. 7404212 in view of Moore et al. as applied above and further in view of Corliss.

As per claim 9, the modified claims in view of Moore et al. teach intercepting codes that are commonly passed over the Internet (see Engel et al. column 19 line 53 through column 20 line 28), but fails to explicitly disclose that the messaging code is short messaging code.

However, Corliss teaches sending short messages (SMS) over the internet (see column 3 line 57 through column 4 line 3).

At the time of the invention it would have been obvious to a person of ordinary skill in the art for the modified system of the '212 claims in view of Engel et al. to intercept short messaging code.

Motivation, as recognized by one of ordinary skill in the art, to do so would have been to monitor SMS messages.

Motivation, as recognized by one of ordinary skill in the art, to do so would have been to monitor SMS messages.

16. Claim 37 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-16 of U.S. Patent No. 7404212 in view of Engel et al. and Elgamal as applied above and further in view of Cogger et al.

As per claim 37, the modified claims in view of Engel et al. and Elgamal system fails to disclose intercepting with said parser a request from one or the other of an original client and an original server for an SSL transfer, creating with said parser a new SSL server that communicates with said client and a new SSL client that communicated with said server, and intercepting with said SSL client and said SSL server communications that occur between said original client and said original server.

However, Cogger et al. teaches such intercepting, decrypting and re-encrypting using SSL (see paragraph [0060]).

Art Unit: 2437

At the time of the invention it would have been obvious to a person of ordinary skill in the art to perform the steps of Cogger et al. in the modified system of the claims in view of Engel et al. and Elgamal.

Motivation to do so would have been to verify a users session (see Cogger et al. paragraph [0060]).

Response to Arguments

17. Applicant's arguments with respect to claims 1-36 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL PYZOCHA whose telephone number is (571)272-3875. The examiner can normally be reached on Monday-Thursday, 7:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Emmanuel Moise can be reached on (571) 272-3865. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
